# FRP incoming inspection

Use an FRP incoming inspection checklist to record lot identity, drawing revision, dimensions, fit, surface condition, quantities and contracted documents.

01 **Dimensions & fit**

02 **Surface & ends**

03 **Lot & quantity**

04 **Agreed documents**

### 01 Identify the delivery

Match supplier, purchase order, packing list, lot labels and drawing revision.

### 02 Inspect agreed features

Use the agreed sampling plan, measurement setup and approved appearance reference.

### 03 Record the evidence

Enter measured results and photo or report references against each requirement.

### 04 Close discrepancies

Identify affected pieces and obtain a documented acceptance or corrective decision.

Use the editable worksheet to record project checks. This checklist supplies no default tolerances, sampling level or pass/fail limits.

Dimensions and appearance do not establish structural, fire, electrical or chemical performance. Review contracted evidence separately.

Do not treat supplier management-system certificates as product conformity evidence. Match each report to the supplied material and lot where required.
